## **Acquisition of the Optical Device Business of Daicel by Japan E.M. Solutions**

We announced today that Japan E.M. Solutions Co., Ltd. ("JEMS"), a portfolio company of Endeavour United III Investment Business Limited Partnership, a fund under management of Endeavour United Co., Ltd. ("EU"), has acquired the optical device business (the "Business") of Daicel Corporation ("Daicel").

Established in 1984, JEMS is an ODM/EMS provider offering a diverse range of products, including mobile devices, tablets, displays, cameras, and printed circuit board assemblies.

The Business possesses technology and know-how for all-resin wafer-level lenses, developed through the integration of Daicel's proprietary materials and manufacturing technologies. This technology enables the simultaneous molding of hundreds of lenses or more from a wafer-shaped resin. A key advantage is its ability to achieve significant miniaturization and cost reduction compared to conventional lenses. Currently, the Business's lenses are increasingly being adopted in advanced applications such as endoscopes and industrial equipment.

Through this acquisition, JEMS will be able to provide end-to-end solutions, from the manufacturing and sales of individual lenses to fully integrated modules, by combining the newly acquired lens technology with its existing strengths in mounting and assembly. By expanding high-value-added optical device solutions across the medical, industrial, and smart device markets, JEMS aims to strengthen its revenue base and drive further business growth.
